01 COMPANY AT A GLANCE

Kamalta Enterprises Ltd is a Kenyan building and civil engineering contractor. We construct and maintain roads, put up buildings, and supply construction materials to public and private clients.

Registered name	Kamalta Enterprises Ltd
Legal status	Private limited company, incorporated in Kenya
Core services	Road construction and maintenance · Building construction · Construction supplies
Telephone	+254 722 145245
Email	info@kamaltaltd.co.ke

02 ABOUT US

Kamalta Enterprises Ltd delivers public works to specification, on programme and within the contract sum. We work across three lines: road construction and maintenance, building construction, and the supply of construction materials.

Our business is built for public procurement. We keep our statutory documents current, price tenders from the bills of quantities as issued, and report progress in the format the procuring entity requires. Every contract is run by a named site lead who answers to the Managing Director.

We hire and train local labour on every site where the contract allows. That keeps money in the community the road or building serves, and it keeps our crews close to the work.

03 VISION, MISSION AND VALUES

OUR VISION

To be the contractor Kenya's public agencies trust first with their roads and buildings.

OUR MISSION

To build roads and buildings, and supply materials, that meet specification, finish on time and stay within budget — while keeping our workers and the public safe.

Core values

Integrity	We price honestly, bid only for work we can deliver, and keep clean records.
Quality	Every material is tested and every layer is checked before the next goes down.
Safety	No task is so urgent that it is done unsafely.
Accountability	One named person owns each contract, from mobilisation to handover.
Timeliness	We plan to the contract programme and report early when anything threatens it.

04 OUR SERVICES

We offer three services, priced and delivered separately or as one package.

Roads and civil works

- New road construction: earthworks, sub-base and base layers, bitumen and gravel surfacing
- Rehabilitation, periodic and routine maintenance of paved and unpaved roads
- Grading and gravelling of rural and access roads
- Drainage: culverts, side drains, mitre drains, scour checks and gabions
- Paved works: cabro and concrete paving for streets, parking and walkways
- Road furniture: signage, road markings, kerbs and guardrails

Building construction

- New buildings: offices, schools, health facilities, housing and institutional blocks
- Substructure and superstructure: foundations, reinforced-concrete frames, masonry, roofing
- Renovations, extensions and refurbishment of existing buildings
- Finishes, with plumbing and electrical installations coordinated with licensed specialists
- External works: perimeter walls, gates, guard houses, drainage and landscaping

Construction supplies

- Aggregates: ballast, sand, hardcore and murram
- Cement, steel reinforcement and binding wire
- Building stones, blocks and cabros
- Concrete culvert pipes and precast items
- Timber and roofing materials
- Delivery to site, with delivery notes and supplier quality certificates where the tender requires them

05 HOW WE DELIVER

Every contract follows the same six stages, so the client knows what to expect and when.

01 Tender review and pricing
We visit the site, check the drawings against the bills of quantities, and price each item from current material and plant rates.

02 Mobilisation
On award we submit the work programme, name the site lead, and move plant, materials and crew to site within the contract period.

03 Execution
Work proceeds to the approved programme, with daily site diaries and weekly progress meetings with the client's engineer.

04 Quality control
Materials are tested before use, and each completed layer or element is inspected and signed off before the next begins.

05 Reporting
Monthly progress reports and interim payment certificates are prepared in the client's required format.

06 Handover and defects liability
We hand over with as-built records and return to fix any defect raised during the defects liability period.

06 QUALITY, HEALTH, SAFETY AND ENVIRONMENT

We comply with Kenyan law on every site and hold ourselves to the contract specification, not the minimum.

Quality	Materials are tested at approved laboratories before use. Compaction, concrete strength and layer thickness are checked and recorded for each section of work.
Health and safety	We operate under the Occupational Safety and Health Act, 2007. Every worker is inducted, issued with protective equipment, and briefed daily. Each site keeps a first-aid kit and a trained first-aider. On live roads we set up signed traffic management and flag control before any work starts.
Environment	We follow the Environmental Management and Co-ordination Act, 1999 and the conditions of each project's NEMA licence. We control dust and noise, dispose of spoil at approved sites, and restore borrow pits and work areas at completion.
